

Project Sign-Off & Team Performance Summary

Mock Sprint — Task 2

Project Details

Project name: 09-IBM-AI-Powered Consulting Simulation Team 1

Prepared by (PM): Gayath Wethmin Kaluwahewa

Date: 14/08/2026

Team:

1. PM – Gayath Wethmin Kaluwahewa
2. BA – Fatima Hubail
3. UX – Amritha Selvaganapathi
4. Dev1 – Kashaf Fatima
5. Dev2 – Ibrahim Allouche

Project Summary

The team restyled the boilerplate's login page and built a new team page (name, member photo/role/blurb), with the login flow redirecting to the team page on success and route-guarding it for unauthenticated access. All 9 board tasks were carried through to Done, each with a completion comment and acceptance criteria ticked, in line with the sprint's hard rules. Work stayed within the ~10 hour/person budget outlined in the assignment. The feature is deployed and live at - <https://team9-garage-boilerplate-frontend.vercel.app/auth/signin>

Overall Team Reflection

What went well: Clear role separation (BA → UX → BA validation → Dev build → Dev test → PM sign-off) kept work moving without overlap, and the requirement to leave a completion comment before moving a card meant handoffs were always clear — nobody had to ask "what's already been done here." Splitting build and test between the two Devs (each testing the piece they didn't build) caught issues neither developer would have noticed reviewing their own work.

What to improve next time: Some early setup steps (Firebase config, git/SSH authentication) took longer than expected for team members newer to the tooling — front-loading a short shared setup walkthrough before Week 1 tasks began would save time on future sprints. We'd also assign Planner cards to real people at the very start rather than partway through, since a few cards sat with the role tag but no named owner for longer than they should have.
